Summary

High-impact Software Engineer with **4+ years** of experience building scalable enterprise solutions for healthcare and fintech domains. Expert in **Java Spring Boot**, React, and **Cloud Architectures (AWS/Azure)**, delivering high-availability microservices and optimizing data pipelines. Committed to building secure, compliant, and user-centric applications that drive digital transformation.

Technical Skills

- **Languages:** Java (Core/Multithreading), C++, Python, TypeScript, SQL, JavaScript (ES6+).
- **Backend:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Microservices, RESTful APIs, Kafka, FastAPI.
- **Frontend:** HTML5, CSS3, React.js, Redux, Angular, Next.js, Bootstrap, TailwindCSS, jQuery, JSON, AJAX.
- **Data & Cloud:** PostgreSQL, MySQL, Oracle, MongoDB, AWS (EC2, S3), Azure, Docker, Kubernetes.
- **DevOps & Tools:** Git, Jenkins, Maven, CI/CD Pipelines, Agile/Scrum, JIRA, Postman, Splunk.

Professional Experience

Software Engineer, McKesson

Sep 2024 – Present | USA

- Developed scalable **B2B microservices** using Java Spring Boot and React, facilitating pharmaceutical ordering for **4,500+ pharmacies** and cutting API latency by **40%** via distributed **Redis caching**.
- Automated complex medical prior authorization workflows using **Azure Logic Apps** and Kafka, accelerating patient access to critical specialty medications across twenty distribution centers and reducing manual administrative overhead.
- Engineered event-driven microservices using **Apache Kafka** to synchronize inventory across supply chain systems, achieving data consistency and eliminating stock discrepancies for **\$2M+** in daily shipments.
- Integrated **Splunk** and Micrometer for real-time distributed tracing across **microservices**, reducing Mean Time to Resolution (MTTR) for critical production incidents by 50% and ensuring **99.9%** system availability.
- Revamped the pharmacy management dashboard using React and TypeScript, implementing **React.lazy** and code-splitting to optimize rendering performance for heavy data grids used by internal stakeholders.
- Optimized complex **SQL queries** and stored procedures within Oracle databases, enabling real-time analytics for executive leadership to monitor operational efficiency and drug utilization without impacting production performance.
- Modernized **CI/CD pipelines** using Jenkins and Docker on Azure Kubernetes Service, significantly reducing deployment cycles while ensuring strict HIPAA compliance and zero downtime during release windows.
- Implemented comprehensive unit and integration testing frameworks using JUnit and **Mockito**, preventing critical production defects during the migration of legacy monoliths to a containerized microservices architecture.

Software Engineer, Nion IT System

Aug 2020 – July 2023 | India

- Developed robust **RESTful APIs** for a global logistics client using Java and Spring Boot, streamlining shipment tracking processes and handling over **10,000 daily transactions** with high system reliability.
- Led the migration of legacy on-premise applications to **AWS cloud infrastructure**, utilizing **EC2** and **S3** to reduce operational overhead while enhancing system scalability and disaster recovery capabilities.
- Designed responsive user interfaces for an e-commerce platform using **Angular** and Bootstrap, increasing user engagement through intuitive navigation and seamless integration with backend payment gateway services.
- Refactored database schemas and indexed **MySQL tables** to optimize data retrieval speeds, resulting in improved query execution plans and stable application performance during peak high-traffic shopping seasons.
- Enforced static code analysis and security standards using **SonarQube**, reducing technical debt by 30% and preventing critical vulnerabilities prior to production deployment.
- Built internal automation tools using **Python and FastAPI** to streamline data reconciliation tasks, saving the operations team significant manual effort and eliminating data entry errors across client accounts.
- Collaborated within an **Agile/Scrum** team to deliver feature enhancements on two-week sprints, consistently meeting delivery timelines and reducing backlog items through effective peer code reviews.

Education

Master of Engineering in Computer Science, University of Cincinnati, Cincinnati, Ohio

Aug 2023 – May 2025

Bachelor of Technology in Computer Science, Jawaharlal Nehru Technological University, India

Aug 2019 – May 2023

Certification

- Microsoft Certified: Azure Fundamentals (April 2025)
